Skills

GenAI: LangChain, LangGraph, Agent SDK, RAG, Vector Databases, Prompt Engineering
Front End: HTML, CSS, Javascript, TypeScript, React, ContextAPI, Tailwind CSS
Backend: Node.js, Express.js
Languages: JavaScript, TypeScript, Python
Tools: Docker, Git, Github, Postman
Database: MongoDB, PostgreSQL

Education

Guru Gobind Singh Indraprastha University , B.Tech Computer Science Engineering	2021 – 2025
• CGPA: 8.36	
Class 12 , National Victor Public School, CBSE	2020 - 2021
• Percentage: 83.8%	
Class 10 , National Victor Public School, CBSE	2018 - 2019
• Percentage: 86.4%	

Experience

Full Stack Web Developer, Staar Payout	May 2025 - November 2025
- Implemented client-side input sanitization across user input fields to prevent XSS attacks by restricting malicious character injection. - Refactored legacy codebase by separating HTML, CSS, and JavaScript into modular files and eliminating inline styles, improving maintainability and readability - Strengthened backend reliability by implementing structured error handling with exception-level logging to log files, enabling faster debugging and issue tracking	

Projects

RoughNote (Next.js, NeonDB, Prisma, Clerk Auth, ShadCN, Gemini SDK, OpenAI SDK)	Live Link
- Built an AI-powered journaling platform with secure authentication, mood tracking, analytics, and intelligent journal organization. - Implemented a Retrieval-Augmented Generation (RAG) system using vector embeddings and semantic search, enabling users to interact conversationally with their journal history and receive context-aware insights.	
Closeclaw (OpenRouter, nodejs, Typescript, Agentic AI)	Github
- Built a Bun-powered TypeScript AI assistant with CLI and Telegram bot modes, enabling interactive question answering, goal planning, and agent-driven task execution. - Integrated OpenRouter model access and optional web-tool support for automated workflows, codebase analysis, and secure owner-only Telegram command control.	
NotebookLM (Next.js, LangChain, OpenAI SDK, RAG, Clerk Auth, ShadCN)	Github
- Built a multi-stage prompt engineering RAG pipeline 30% more efficient than traditional RAG chatbot, using LangChain, OpenAI, and Qdrant with query rewriting and HyDE for context-aware document retrieval - Integrated vector similarity search with Qdrant Vector Store and OpenAI embeddings to enable intelligent document retrieval and context-based answer generation
